

# Towards high quality, low-carbon ventilation in airtight buildings

# AIVC International Workshop Tokyo, Japan 18-19 May 2023

#### Workshop description

NILIM and BRI of Japan, together with the Air Infiltration and Ventilation Centre (AIVC) organise a workshop entitled "Towards high quality, low-carbon ventilation in airtight buildings" to be held on 18-19 May 2023 in Tokyo, Japan.

The 2-day workshop provides the opportunity to Japanese researchers and engineers, as well as international experts visiting Japan, to present and discuss recent developments in relation to ventilation and airtightness. The workshop is organized in 5 thematic sessions.

In the opening session, a representative of the ministry in charge of Japanese policies toward zero carbon buildings in 2030 and 2050 will describe the latest concrete policy measures including energy efficiency. Latest evolutions in regulations and standards on energy performance and ventilation in Europe and the US will also be presented.

In the session for IEA EBC Annexes (international collaborative R&D projects), which are relevant to ventilation, latest outputs from 1) technologies for gas-phase air cleaning (Annex 78), 2) side-by-side management methods of indoor air quality and energy efficiency (Annex 86) and 3) personalized environmental control system technologies (Annex 87) will be presented.

An airtight building envelope is essential especially in order to avoid heat loss due to air leakages. In non-residential buildings, in addition to wind and stack effects, air pressure caused by HVAC systems may worsen the heat loss due to the air leakages. However, it seems that effective techniques for improving the airtightness in non-residential buildings have not yet been shared enough among Japanese building engineers and researchers. Some existing approaches in Europe, North America and Japan and future perspectives for standardisation will be discussed in the airtightness session.

In the session on approaches to search for more energy efficient and reliable ventilation systems, the latest standards for testing heat recovery effectiveness in laboratories will be reviewed with test examples, in which key characteristics of products influential on the actual effectiveness have been demonstrated. Characteristics of the Japanese market of energy recovery ventilators and improvements in the latest products will be analyzed. Performance assessment of other energy efficient ventilation strategies and smart ventilation is also discussed.

In the session on the role of ventilation in infection control, a Japanese government proposal in July 2022 on effective ventilation to avoid infections by large aerosol and small floating aerosol diffusion will be reviewed with some actual infection case studies. Also, the characteristics of aerosol transmission route of respiratory pathogens and their mitigation strategies will be discussed by building physics researchers, who have been collaborating with medical experts in the committee dedicated to the Japanese infection control strategies. Other presentations discuss new developments in ventilation standards and regulations, and advances in measurement techniques.

### **Programme**

Cheirs: Takao Sawachi (BRI), Peter Wouters (INIVE)  O9:00 Welcome on behalf of NILIM Takankiko Hasegawa (Deputy Director-General, NILIM, JP)  O9:10 Welcome on behalf of BRI and overview of IEA-EBC Takao Sawachi (EBC Executive Committee Chair, JP)  09:20 Overview of AIVC, TightVent, venticool & IEQ-GA Amold Jansasens (AIVC Operating Agentility/EUGent, BE)  09:30 Context and policies for energy, climate, ventilation in Japan  09:55 The context and policies for energy and ventilation in Europe, new evolutions in EPBD Shape 10:20 Ventilation standards/regulations in the US Iain Walker (LBNL, USA) PDF  10:20 Ventilation standards/regulations in the US Iain Walker (LBNL, USA) PDF  10:45 Break  IEA-EBC Annoxes  Chairs: Hilde Breesch (KU Leuven), Kazuhide Ito (Kyushu University)  11:15 A general overview of IEA-EBC Annex 78: Supplementing ventilation with gas-phase air cleaning, implementation and energy implications  and the supporting information from its lice model for transport efficiency of acctone from indoor to olfactory epithelium cells  11:30 International standardization of testing perceived air quality and the supporting information from itsic model for transport efficiency of acctone from indoor to olfactory epithelium cells  11:55 An update on IEA-EBC Annex 8: Energy efficient smart IAC management in residential buildings  12:10 Dalying with DALYs: a harm-based approach to IAQ Benjamin Jones (Nottingham University, UK) PDF  12:36 Break  13:35 IEA-EBC Annex 87: Energy and indoor environmental quality reformance of Personalised Environmental Control Systems (FECS)  14:35 Actual effectiveness of energylineat recovery ventilations in buildings how is it influenced by key design factors and its buildings how is it influenced by key design factors and its buildings how is it influenced by key design factors and its buildings how is it influenced by key design factors and its buildings how is it influenced by key design factors and its buildings how is it influenced by key design factors and its buildings how is		Day 1 – Thursday May	18 <sup>th</sup> 2023

## **Organisers**

The workshop is organized by <u>NILIM</u> and <u>BRI</u> together with the Air Infiltration and Ventilation Centre (<u>AIVC</u>) and facilitated by <u>INIVE</u> (International Network for Information on Ventilation and Energy Performance).

#### Language

English will be the official language. No translation is foreseen.

#### Cost

Participation to the workshop is free but requires you to register for the event. Participation is possible in person or online. In case of no-show after registering as in person participant, a penalty of €100 will however be charged.

#### Registration

To register, please fill in the registration form available at: <a href="https://forms.gle/ErfmjSCG6H8RbSXr6">https://forms.gle/ErfmjSCG6H8RbSXr6</a>.

<u>Note</u>: Online registration will close on Friday May 12<sup>th</sup> at 12:00PM CET. After this you can register via email to: aivc2023tokyo@iibh.org

#### Venue

The workshop will take place at Bellesalle Mita Garden (3-5-19 Mita, Minato-ku, Tokyo/Tokyo Mita Garden Tower 2F (Room B+C).

#### **Enquiries**
