

Application of louvres to support ventilative cooling

9 December 2020, Webinar – Resilient Ventilative Cooling in practice

VENTILATION – SUNPROTECTION - OUTDOOR

ivan.pollet@renson.be

About Renson

Belgian family business

- 111 years
- Headquarters in Waregem
- Team of 1200 enthusiastic men & women
- 224 Mio € turnover
- Core business: ventilation, sunprotection & outdoor

VENTILATION – SUNPROTECTION - OUTDOOR

Products

Louvres

VENTILATION – SUNPROTECTION - OUTDOOR

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

Louvres: characteristics, testing and regulation

VENTILATION – SUNPROTECTION - OUTDOOR

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

Louvres: simplicity + multi-functionality

Simplicity

Number of horizontal or vertical
fixed or adjustable blades
(alu/wood)

Multi-functionality

- Ventilative cooling (renewable)
- Solar shading
- Insect-proof
- Rain-tightness
- Persons from outdoors (burglary) or indoors (fall-through)
- Fire/smoke control
- Noise insulation
- Outdoor pollution control (?)
- Opportunities for creativity, integration, accents, ...

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

5

Louvres: flow resistance ↑ + usage of VC potential ↑

Resistance

Reduction of air flow rate
~ 50%

Guarantee on higher usage time

Fully openable windows (90°) instead of tilted (10%)
More operated during night and absence
~ higher utilization factor

On average, net effect of louvres on air exchange rate is mostly limited

6

Ventilative cooling: quick design, rules of thumb

- Available natural pressure difference: $\Delta p \sim 1 \text{ to } 2 \text{ Pa}$
- Required air exchange rate: $q_v = 4 \text{ to } 8 \text{ volumes/h}$
- Air flow rate through opening: $q_v = A \sqrt{\frac{\Delta p}{0,6 K}}$
- Cooling capacity: $\sim 5 \text{ W/m}^2/\text{air exchange rate}$
- Temperature reduction during night in case of at least $10^\circ\text{C } \Delta T$ between max indoor T and min. outdoor T : $\sim 0,75 \text{ to } 1^\circ\text{C}/(\text{vol/h})$

VENTILATION – SUNPROTECTION – OUTDOOR

7

Testing and optimization of louvres performance

Aerodynamic and rain tightness characteristics (EN13030)

Water tightness and air flow rate

Table 3 — Penetration classes

Class	Effectiveness ϵ	Maximum allowed penetration of simulated rain lh^{-1}m^2
A	1 to 0,99	0,75
B	0,999 to 0,95	3,75
C	0,949 to 0,80	15,00
D	Below 0,8	Greater than 15,00

Table 4 — Discharge loss coefficient classification

Class	Discharge loss coefficient
1	0,4 to 1,0
2	0,3 to 0,399
3	0,2 to 0,299
4	0,199 and below

NOTE The above classes also apply to entry loss coefficient.

$$q_v = C_d A \sqrt{\frac{2 \Delta p}{\rho}}$$

8

Testing and optimization of louvres performance

Aerodynamic and rain tightness characteristics (EN13030)

VENTILATION – SUNPROTECTION - OUTDOOR

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

Testing and optimization of louvres performance

$$q_v = C_d A \sqrt{\frac{2 \Delta p}{\rho}}$$

Optimization based on CFD: air flow resistance ↓ and/or water tightness ↑

VENTILATION – SUNPROTECTION - OUTDOOR

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

Testing and optimization of louvres performance

Burglary resistance of window openings (~ building assurances)

- 7 Mechanical strength
- 7.1 Static loading.....
- 7.2 Dynamic loading in resistance classes 1, 2 and 3.....
- 8 Manual burglary attempts

8 Manual burglary attempts

When tested in accordance with prEN 1630 using the tool sets and times specified in Table 6, the test specimen shall not fail at the resistance class claimed. For construction products of resistance class 1 no manual test will be carried out. The tool set A1 is intended for preparation of the test specimen.

Table 6 — Tool sets and resistance time

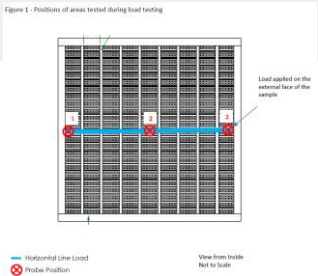

Resistance class	Tool set (see prEN 1630:2009, Clause 7)	Resistance time min	Maximum total test time min
1	A1	—	—
2	A2	3	15
3	A3	5	20
4	A4	10	30
5	A5	15	40
6	A6	20	50

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

Testing and optimization of louvres performance

Barrier load testing / Fall prevention safety (EN13049)

Integration of VC louvres within EPBD regulation

Impact of VC on overheating risk and PE consumption depending on:

Belgium (residential)

- Physical free area of VC openings (≥ 6,4% of room net floor area)
- Accessibility/burglary resistance (location, max opening, **resistance class ≥ 2**)
- Control possibilities

The Netherlands (all buildings)

- Physical free area of VC openings
- Accessibility/burglary resistance (location, max opening, **resistance class ≥ 2**)
- Control possibilities
- **Insect-proof requirement**
- **Rain tightness requirement (louvre, sensor)**

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

Louvres applications in-situ

VENTILATION – SUNPROTECTION – OUTDOOR

Schools (Gent, Belgium)

Passive cooling measures, no active cooling, small or no occupation in summer

VENTILATION – SUNPROTECTION - OUTDOOR

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

Schools (Gent, Belgium)

VENTILATION – SUNPROTECTION - OUTDOOR

Student homes (Bournemouth University, Southern England)

Burglary resistance, fall prevention safety, daylight

Different shapes and colors
> attractive façade

VENTILATION – SUNPROTECTION - OUTDOOR

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

Continuous louvre systems as façade cladding

Integrated architectural
design with
shapes and colours

VENTILATION – SUNPROTECTION - OUTDOOR

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

Continuous louvre systems as façade cladding

International Lyceum > Luxembourg

Private houses (Belgium)

Vertical blades, integration in façade/LED-lighting

Privacy ↔ daylight

VENTILATION – SUNPROTECTION - OUTDOOR

Concept home of Renson (Waregem, Belgium)

Vertical blades, integration in façade

Privacy ↔ daylight

VENTILATION – SUNPROTECTION – OUTDOOR

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

Louvre: movable/adjustable versus fixed

Movable/sliding louvre panels

Green office (Paris – France, 2011)

Adjustable/orientable blades

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

Apartments (Weinfelden, Switzerland)

Personalization

VENTILATION – SUNPROTECTION - OUTDOOR

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

Renson offices/showroom (Waregem, Belgium, 2002)

Designed 20 years ago as an example of bioclimatic architecture, and still contemporary

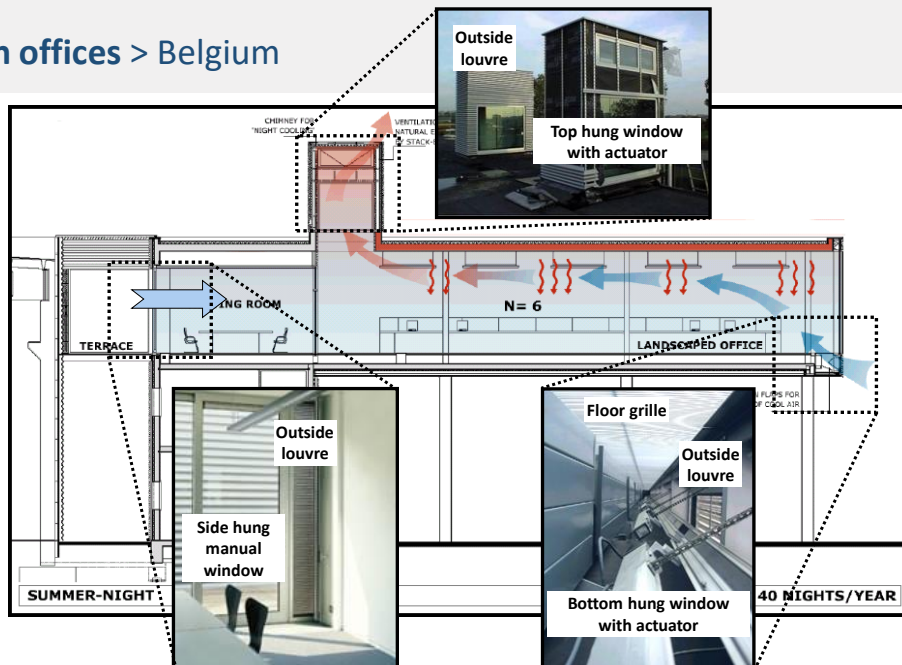

9 December 2020 - Webinar "Resilient Ventilative Cooling in practice"

Renson offices (Waregem – Belgium, 2002)

- PSV
- $n_{\text{design}}: 6 \text{ h}^{-1}$
- $\text{Area}_{\text{VC}} \sim 2\% \text{ of floor area}$
- Controlled by BMS
- Combined with external SS + exposed thermal mass
- $>26^\circ\text{C}$: 5 to 8% of office hours (high occupation and climate change)
- $>28^\circ\text{C}$: $<1\%$ of office hours

27

Renson offices > Belgium

28

Louvres...

where simplicity meets multi-functionality
